Question Label : Multiple Choice Question

A Fraud detection model a FinTech company is put to production which is used for flagging suspicious transactions from going through the company's payment system. On a given day the 500 transaction attempts were made in the company's payment system and the ML model has declined all the transaction attempts on the grounds of Fraud, upon taking a manual review it was noticed that all the 500 transaction attempts were indeed genuine. Now which of the following statement is True about the model.

Options :

6406532052723. ✖ Precision = 100%

6406532052724. ✖ Recall = 100%

6406532052725. ✔ Recall is Undefined

6406532052726. ✖ Recall = 0%

6406532052727. ✖ Precision is Undefined

Which of the following statement is correct?

Options :

6406532052728. ✔ Anomaly detection framework can be used for identifying types of frauds that are not known a priori.

6406532052729. ✖ Supervised learning framework can be used for identifying types of frauds that are not known a priori.

6406532052730. ✖ Anomaly detection framework is always superior to supervised learning framework.

6406532052731. ✖ One can use mean absolute error as a performance metric to measure the performance of Random Forest classification algorithm.

Fill the missing information to complete the confusion matrix below:

		Actual Class	
		Fraud	Non - Fraud
Predicted Class	Fraud	500	A
	Non - Fraud	B	10000

Total True Frauds = 520, Total data points that were predicted as non-Fraud = 10020

Options :

6406532052732. ✖ A = 60, B = 60

6406532052733. ✖ A = 20, B = 100

6406532052734. ✖ A = 100, B = 20

6406532052735. ✔ Information insufficient

Question Label : Multiple Choice Question

A fintech company has a ML system that identifies transaction frauds that occur in its system. The model currently has a recall of 99.9%. The fraud rate, as reported by the company in its system is 20 BPS. On a regular day there are close to above 1 million transactions that happens via the company's payment system, and for each fraudulent transaction the company losses INR 10 on an average. The annual savings (INR) brought in by the ML system is:

Options :

6406532052738. ✖ ~3.4M

6406532052739. ✔ ~7.2M

6406532052740. ✖ ~19.9K

6406532052741. ✖ Insufficient information to solve the problem.

Question Label : Multiple Choice Question

You have built a linear regression model for predicting the number of users who access your payment platform daily. The following table shows the model's performance:

Day	Model's prediction	True Value
Jan 1	20	22
Jan 2	15	20
Jan 3	16	23
Jan 4	8	16
Jan 5	50	30
Jan 6	70	95
Jan 7	50	80

Consider the following statements and choose the right option below:

Statement 1: Linear Regression is a not very good fit for this use case.

Statement 2: Linear Regression is a very good fit for this use case.

Statement 3: The model's errors are not normally distributed.

Options :

6406532052746. ✖ Statement 2 and 3 are correct.

6406532052747. ✖ Statement 1 is correct and statement 3 is not the right explanation for statement 1.

6406532052748. ✔ Statement 1 is correct and statement 3 is the right explanation for statement 1.

6406532052749. ✖ Statement 2 is correct and statement 3 is not the right explanation for statement 1.
